Training

Certero Provisioning

This course is a practical, hand-on session covering the full setup and configuration of Certero Provisioning, from the required prerequisites, downloading the software from Certero's Customer Centre, running the setup routines, running through the configuration, creation and management of instances of the Certero Platform. This includes general navigation, what the Certero Provisioning screens mean and a detailed look at once a new Certero tenant is provisioned, the backup, upgrade and removal functionality.

Attendee Prerequisites

Experience in deploying and configuring client-server applications.

Agenda

- Certero Provisioning overview
- Server prerequisites
- Downloading and running the Certero setup routines
- Initial login and configuration
- Customer Centre integration
- Deploying and configuring a Certero tenant
- Navigation and the user interface
- Tenant management options
- Performance and capacity management considerations

Who Should Attend

This course is aimed at staff that will be responsible for either deploying instances of Certero solutions, and/or be responsible for the on-going management of a Certero instance. Typically:

- Certero solution owner within your organization
- Application / Solution Provisioning
- Systems Administrators

Benefits of Attending

- Learn how to quickly provision new instances of the Certero solution
- Understand security and encryption options available
- Obtain a deep understanding of how and why Provisioning interacts with the Certero Customer Centre
- Confidently manage your instances of Certero through their lifecycle through to decommissioning
